

**UNIQUE HEAT SEAL DESIGN AND MATERIAL**

The trays have been designed to enable them to be heat sealed or hand lidded. Sharpak use a modified APET material designed for heat seal applications that ensures either a permanent or peelable seal depending on the application.

**RIB DESIGN**

The 6 depths of trays with options of heat sealing or flat lids have been manufactured with a sympathetic rib design to maximise strength and ensure the product it holds is protected during transit. The ribs are concentrated in the corners optimising on product visibility.

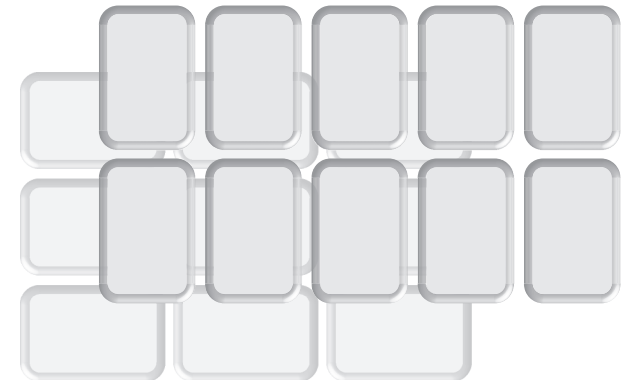

**RECYCLED PET MATERIAL**

Manufactured with post consumer waste from European and UK waste stream.

**The right technical choice**

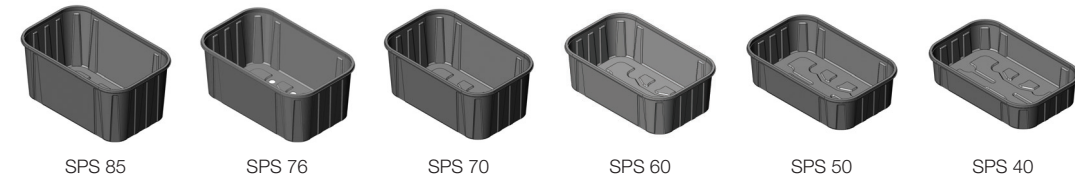

**Heat Seal option - 19 per crate  
(9 in the bottom layer, 10 in the top layer)**

**Lidded option – 9 up format**
